

THE WORLD'S ONLY PREDICTIVE MOTION ANALYTICS SYSTEM

TRANSFORM

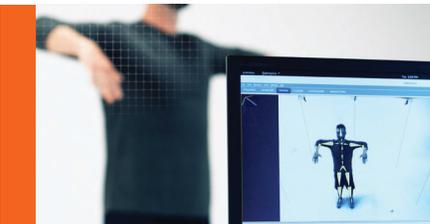

HUMAN MOVEMENT

DARI Motion Health

A new era in player health & performance improvement

DARI Motion Health is a revolutionary biomechanical analysis technology harnessing the power of markerless motion capture and sophisticated cloud-based analytics to transform human movement. Using DARI, you can use objective movement data to proactively help your players optimize performance, avoid injury, and streamline recovery.

Optimize Performance

- DARI is focused on creating solutions to capture all forces, angles and velocities generated in baseball-specific motions, and more.
- By identifying movement asymmetries that impede peak performance, DARI helps you unlock a player's full potential.

Assess Risks, Reduce Injuries

- In a five-minute scanning session, DARI Motion Health identifies musculoskeletal asymmetries and poor movement patterns that indicate a greater risk for future soft tissue injuries.
- DARI's targeted, actionable reporting makes it easy for you to suggest corrective activities that assist with player health.

Streamline Injury Recovery with Objective Data

- Use DARI to establish a pre-injury baseline on your players and then objectively assess their post-injury rehabilitation progress—using their own movement as a reference.
- Enhance player experience and improve compliance by providing objective progress data that shows them exactly where they are on the road to recovery.

The DARI Difference

Freedom from Constraints

DARI is the first system ever to provide full body kinematics and kinetics without time-consuming markers or force plates, allowing you to scan up to 50 players per day with a single system.

Action Data Immediately

DARI's powerful cloud processing delivers data in easy-to-read reports just seconds after an assessment, allowing you to work with players as soon as they step out of the capture space.

Track Over Time

DARI's markerless motion capture system is accurate to the millimeter between sessions—far better than any other motion capture platform on the market. That gives you the power to objectively track a player's health and performance capacity over the course of a season.
